

Important notes for installation of ALControl™ software July 2016

This update note applies to installation of the ALControl™ v1.3 software, for remote-controlling the Sentinel3 or Sentinel10 amplified loudspeaker controllers.

The installation pack contains:

> ALControl™ v1.3 software, in MAC and PC format

>>It is essential that the front firmware is updated to (at least) v1.29. This update is necessary for the front control to support the ALControl™ remote-control program.

1) Unzip the ALControl folder in a specific folder of your choice.

> note that after unzipping the main folder, the PC version is also zipped; This is done to prevent spam filter issues with the .exe file inside the PC version folder.

2) After unzipping the folders, select your version, MAC or PC.

3a) For MAC, just click on the “alcontrol.dmg” file

3b) For PC, click on the “alcontrol.exe” file and let the program install itself.

> connect the router to the ALControl™ Network RJ45 connector on the rear of the Sentinel.
